

POCKETSMART AI

PocketSmart AI – Project Documentation

- Abstract: PocketSmart AI is a smart budgeting and recommendation assistant designed to help users organize expenses and understand spending through summaries and AI-assisted insights.
- Objectives: simplify expense tracking, improve visibility into spending, support budget monitoring, and provide contextual recommendations.
- Modules: user interface, transaction management, analytics/dashboard, budget management, and AI assistant integration.
- Expected outcome: an accessible application that turns recorded expense information into understandable summaries and recommendations.
- Limitations: AI outputs may be inaccurate; recommendations are informational and should not be treated as professional financial advice.
- Future scope: receipt scanning, recurring transactions, exportable reports, multi-currency support, and improved personalization, subject to feasibility and privacy review.
